

## **WX Keyboard Installation Guide**

You can install and set-up any language WX keyboard by following the steps mentioned below. However, we have taken a specific language WX keyboard for demonstration.

### **Installation**

- 1) Download the WX keyboard from [here](#).
- 2) Unzip the contents of the downloaded file.
- 3) Once extracted, open "teluguwx/hindiwx/tamilwx" folder.
- 4) Double click on "**setup**" file to proceed with installation and click "**close**" after the "Installation finished" dialog box appears.
- 5) **Restart** your computer to make the changes effective.

### **Setup**

> The installed WX keyboard can be found in the right bottom corner of the task bar(i.e. input language section to the left side of date)

> **Click** on language section to find the list of installed keyboards and select your installed WX keyboard(For example: Telugu WX keyboard) to start using the keyboard(to switch between different keyboards press windows button + space bar).
